

PRICING STRATEGY MEMO

Value Drivers, Segmentation, and Tier Design for B2B SaaS

A pricing recommendation that connects willingness to pay, packaging logic, and commercial execution.

Work Type

Self-initiated

\$49 / \$149 / \$399 recommended tier ladder
340 active customers in scenario
+35-45% projected ARPU uplift

3 target segments

\$49 / \$149 / \$399

+35-45% ARPU

Self-initiated sample

Portfolio asset built for recruiter, operator, and client review.

Self-initiated strategy memo based on real pricing research methodology. Simulated decision-grade sample.

The pricing problem was a segmentation problem

A single tier forced unlike customers into the same value story.

Key points

- The current product had 340 active customers on a flat \$99/month tier.
- Expansion revenue was limited because larger accounts had no clear upgrade path.
- Smaller customers faced unnecessary feature complexity while enterprise prospects lacked control features.

Decision focus

Redesign pricing so the product captures value more precisely without slowing adoption.

Five value drivers explain willingness to pay

The pricing model should follow the order in which customers actually experience value.

Time saved

Highest WTP impact because customers recover 8-12 hours per week.

Integration depth

High WTP impact when the product fits existing workflow systems.

Collaboration and control

Important for larger teams that need shared ownership and auditability.

The customer base naturally separates into three segments

Each segment pays for a different combination of scale, control, and workflow complexity.

Small practices

Price-sensitive teams that need core workflow benefits without overhead.

Growing firms

Mid-sized teams that value collaboration and integration more than the lowest price.

Established operations

Larger buyers that pay for admin controls, compliance, and custom workflow fit.

The recommended tier architecture creates clean upgrade fences

The pricing ladder should make the customer progression obvious to both product and sales teams.

Tier	Price	Target	Key features	Value proposition
Starter	\$49	1-5 users	Core workflow, 2 integrations	Replace manual processes
Professional	\$149	6-25 users	All integrations, collaboration	Team productivity
Business	\$399	26-100 users	Custom integrations, compliance	Operational scale

The ladder captures value while keeping the pricing page readable.

The price ladder should mirror the value ladder

Each step up the pricing ladder maps to a clear increase in workflow value and organizational complexity.

Insight

A clean ladder is easier to sell than a crowded matrix of weakly differentiated plans.

Validation needs to happen before a full rollout

Good pricing work ends with a test plan, not a slide that says done.

Key points

- Run a Van Westendorp price-sensitivity survey with free-tier users.
- A/B test the new pricing page on half of inbound traffic for two weeks.
- Offer the new tiers to high-usage customers with a grandfather option.
- Pressure-test the packaging logic inside enterprise sales calls.

Expected result

The recommendation targets higher ARPU, lower churn, and stronger expansion revenue without a harder adoption path.

This asset demonstrates commercial reasoning, not only research

It positions Santiago as someone who can translate product value into monetization logic and decision-ready pricing structure.
