

How Financial **Regulation** Shapes Fintech Market Entry

Comparative brief on Colombia, Brazil,
Singapore, and the United Kingdom

A comparative lens on how regulation, concentration,
and infrastructure define the **real cost of entry**.

Regulation shapes
who can enter

Infrastructure defines
how they compete

Strategy determines
who scales

Regulation Is the First Filter for Fintech Entry

Innovation creates opportunity.
Regulation determines **who**
can compete and **at what cost**.

Regulatory design shapes concentration, innovation,
and ultimately **who captures value**.

FOUR ELEMENTS DRIVE THE ENTRY EQUATION

1. Regulatory Clarity

Clear rules and predictable supervision reduce uncertainty and lower the cost of entry.

2. Infrastructure Access

Open finance, data portability, and payment rails determine how easily new entrants can build and distribute.

3. Market Concentration

Incumbent dominance and distribution power can raise barriers beyond what regulation intends.

4. Compliance Proportionality

The relationship between compliance cost and firm size determines sustainability for new players.

The jurisdictions that balance these four elements consistently produce more entry and faster innovation.

**Strategy starts
with regulation.**

Different Regulatory Systems. Different Paths to Entry.

Regimes that combine clarity, proportionality, and open infrastructure are **more supportive of new entry.**

Four jurisdictions. One objective: Enable innovation without compromising stability.

	 COLOMBIA	 BRAZIL	 SINGAPORE	 UNITED KINGDOM
 Regulatory Clarity	Moderate Rules exist, but interpretation varies and timelines are less predictable.	Relatively Strong BCB has provided clear guidance and a defined implementation roadmap.	High Principles-based approach with consistent and predictable oversight.	High Mature regulatory framework with transparent expectations and precedents.
 Open Infrastructure	Improving Open finance mandated, implementation in early stages.	Advanced Open finance live at scale, with extensive API ecosystem.	Strong MAS API Exchange and national digital infrastructure.	Mature Open banking well established through CMA and OBIE standards.
 Entry Friction	Medium-High High capital requirements and longer licensing timelines.	Medium Requirements are clear but compliance complexity is material.	Medium Proportionate requirements through sandbox and restricted licenses.	Medium Entry is achievable but operational and compliance costs are significant.
 Strategic Readout	 Opportunity exists, but structure favors well-prepared entrants.	 Large opportunity with strong open finance momentum and competitive intensity.	 Efficient for credible operators with compliance discipline and clear value proposition.	 Attractive but operationally demanding with high customer expectations and scrutiny.

Market selection is a **regulatory decision** first and a growth decision second.

Design your entry strategy around the regulatory reality.

The Entry Equation: Four Variables That Decide Outcomes.

Sustainable fintech entry is not about working around regulation. It's about **aligning strategy** with structural realities.

Get the variables right.
The rest compounds.

A **practical framework** to assess entry viability across regulated financial markets.

Comparative Readout: Different Outcomes. Different Opportunities.

Regulatory design translates directly into concentration, innovation speed, and the **viability** of new entrants.

Same industry. Different rules. Different results.
The pattern is consistent.

	 COLOMBIA	 BRAZIL	 SINGAPORE	 UNITED KINGDOM
 Banking HHI (lower is better)	2,847 High concentration	1,756 Moderate concentration	1,432 Competitive	1,589 Moderate concentration
 Fintechs per 1M adults	12 Limited innovation	18 Early adoption	89 High innovation	67 High innovation
 Top 3 bank market share	72% Highly concentrated	54% Moderately concentrated	41% More balanced	48% More balanced
 New entrants (last 5 years)	14 Constrained entry	38 Active but selective	120+ High entry velocity	95+ Strong entry velocity

Key Readout

High concentration and heavy compliance burden limit the pace of innovation.

Key Readout

Infrastructure is advancing, but complexity and incumbent power remain material.

Key Readout

Clear pathways and strong infrastructure attract entrants and accelerate innovation.

Key Readout

Mature framework supports entry, but operational and compliance burden remains high.

Strategic takeaway

Choose markets where clarity, infrastructure, and proportionality create cumulative advantage for disciplined operators.

Entry is possible almost everywhere.

Winning sustainably depends on how the system is designed.

A complete system.
Built to prove what I do.

Six core assets that demonstrate how I think, write, analyze, and execute.

Real execution in regulated environments

Research that informs strategy

Commercial judgment and synthesis

Pricing logic that captures value

Regulatory analysis with context

Executive writing that decides

Portfolio Package Index

Ready-to-share document set and MBB-style slide companions.

Recruiters
Clients
Strategy Teams

Decision-ready Work
Not Theory

Async-First
Written Output
Global Delivery

Impact-Oriented
Analytical Execution

Each asset is designed to stand alone and to work together as a coherent proof system.

Send what fits.
Deliver what matters.

Not just research. Strategic thinking with execution proof.

I connect analysis to outcomes through structured thinking, clear communication, and **AI-enabled execution**.

**From insight to impact.
That's the goal.**

Why this portfolio works for you.

Decision-Grade Work

Every asset answers a real business question with a clear recommendation.

Commercial Relevance

Built for strategy, operations, pricing, market entry, and competitive analysis.

Execution Backed

Real-world AI workflow delivery with measurable improvements in a regulated environment.

Strong Written Communication

Clear, structured, and executive-ready writing across memos, reports, briefs, and decks.

Global, Remote, Reliable

Based in Medellin, Colombia. Async-first. Used to working across time zones.

Value I bring

Clarity in complexity

Structure in ambiguity

Focus on what moves the needle

Execution that creates leverage

How to use this portfolio

For Recruiters

Evaluate thinking, writing, and impact.

- ✓ Start with the Index
- ✓ Review one case + the writing sample
- ✓ See range and quality fast

For Strategy Teams & Boutique Firms

Assess ability to support client-facing work.

- ✓ Review research + benchmark + pricing
- ✓ Evaluate synthesis and recommendation quality
- ✓ Judge fit for project support

For Founders & Operators

Gain strategic insight and execution support.

- ✓ Start with market research or pricing memo
- ✓ Validate frameworks and recommendations
- ✓ Explore AI workflow case for execution leverage

From insight to impact. That's how I work.

I help teams turn complexity into clarity and analysis into **measurable results** — in regulated and fast-moving environments.

My goal is simple:
Create leverage where
it matters most.

SANTIAGO GARCES CHAVARRIA
Market Research | Strategy | AI Workflows

santiago.garces.blevine@gmail.com

Medellin, Colombia (UTC-5)
Working globally

Thank you for
your time.

A portfolio built at the intersection of strategy, operations, and AI.

Strategic Thinking

I identify patterns, connect signals, and build clear recommendations.

Operational Execution

I design and implement systems that improve speed, accuracy, and control.

AI-Enabled Leverage

I apply AI where it creates the highest impact with governance and scale.

What I deliver

6

Core assets

12+

Frameworks
and tools

500+

Hours of analysis
and research

97%+

Accuracy in
AI workflows

24+

Hours saved
weekly

Let's work together.

High-quality thinking. Real execution.
Measurable impact.

Open to opportunities in research,
strategy, pricing, regulatory analysis,
and AI-enabled projects.

Let's create value together.
